

Food enzymes

All new food enzymes marketed in the EU are subject to a safety evaluation by the European Food Safety Authority (EFSA) and approval via a Community Positive List. Regulation (EC) No 1332/2008 constitutes the legal basis for authorising and using food enzymes in the EU.

EFSA requires the presentation of an enzyme's toxicological information to carry out a safety evaluation, including assessing its genotoxicity and systemic toxicity. The EFSA Guidance on food enzymes prescribes the process for designing, testing, and documenting the safety of a food enzyme.

SAXOCON provides you with everything you need to plan, test, and document compliance with regulatory requirements, including:

- A plan to describe and justify your test strategy
- Selecting appropriate laboratories, reviewing protocols, and monitoring tests according to the requirements found in OECD Test Guidelines
- A toxicological risk assessment of the results

Why choose us?

SAXOCON services for food enzyme manufacturers give you access to:

- Extensive expertise with EFSA requirements
- A multidisciplinary team of highly skilled toxicologists
- High-level experience with state-of-the-art toxicological evaluations according to international standards

Delivery

SAXOCON compiles all toxicological documentation necessary for the approval of your product.
