

Ready-Set-Go Safe to Market

EC Regulation 1223/2009 on cosmetic products requires that manufacturers of a final product prepare a Product Information File, including a Cosmetic Product Safety Report. Based on this, a competent authority shall be notified before the product is placed on the EU market. Furthermore, testing of cosmetic products on animals is banned in the EU. SAXOCON has expert safety assessors for the evaluation of cosmetic products and their ingredients. We provide you with everything you need to document compliance with regulatory requirements including:

- Select and review of novel or replacement materials during product development, or for material changes during the reformulation of existing products
- Generation of comprehensive toxicological profiles which detail the relevant technical, scientific, and regulatory aspects of ingredient safety
- Conducting and reporting studies using animal-free approaches to test cosmetic ingredients, including the use of computer models such as (Q)SAR and read-across methodologies
- Screening and selection of appropriate packaging and delivery materials during product development and throughout life-cycle management
- A toxicological risk assessment of results

Why choose us?

SAXOCON services for cosmetics manufacturers give you access to:

- A multidisciplinary team of highly skilled toxicologists, material scientists, and supply chain professionals
- Toxicologists with experience from the Danish Environmental Protection Agency with extensive knowledge of EU cosmetics regulation
- Best-in-class experience in using computational toxicology including (Q)SAR modelling and read-across methods
- Safety evaluations based on proprietary information obtained from our world-wide network of raw materials suppliers

Delivery

SAXOCON compiles all necessary documentation in a written Cosmetic Product Safety Report.
