

## Keep track of SVHC in your products

In *EC Regulation 1907/2006* on Registration, Evaluation, Authorisation and Restriction of Chemical substances (REACH), Substances of Very High Concern (SVHC) are substances causing cancer, toxicity to reproduction, disrupt endocrine function, and/or very persistent in the environment. According to the REACH regulation, importers, producers, and suppliers of all EU marketed articles (i.e. manufactured tangible products, which are not chemical substances or mixtures) are required to track the presence of SVHC obtained from each operator in the supply chain including suppliers of articles, substances, and mixtures outside the EU. Furthermore, suppliers shall notify the European Chemical Agency if more than 0.1 % w/w of a SVCH is present.

SAXOCON provides you with everything you need to track, submit, and maintain SVHC information through the supply chain in accordance with regulatory requirements including:

- Gathering relevant information about chemical constituents of your raw materials
- Identification and future monitoring for the presence of SVHC
- Submission of data via Substances of Concern In Products (SCIP) database

### Why choose us?

SAXOCON services for suppliers of consumer products gives you access to:

- A multidisciplinary team of highly skilled toxicologists, material scientists, and supply chain professionals
- Data gathering of proprietary information obtained from our world-wide network of materials suppliers
- Extensive knowledge of REACH regulation and EU Classification and Labelling of chemical substances
- Best in class experience Extensive experience in SCIP submission and other REACH-IT solutions

### Delivery

SAXOCON compiles a written report comprising the toxicological information necessary for fulfilling REACH requirements.
